November 12, 2009

Oilmen's Truck Tanks has completed the Nation's first tank truck for delivering DEF that has all ISO standard components and is weights and measures approved.

SPARTANBURG, SC — On October 29, 2009, after six months of research and development, the Department of Agriculture Weights and Measures certified Oilmen's Truck Tanks' proprietary DEF pumping system. The approval process involved pumping over 300,000 gallons of DEF through Oilmen's system and road testing the unit.

After becoming aware of the EPA (Environmental Protection Agency) mandate that all diesel vehicles with engines greater than 3 liters of displacement manufactured after January 1, 2010 must be equipped to significantly lower NOx (nitrogen oxide) emissions, Oilmen's Truck Tanks developed a delivery system to deliver ultra pure urea (more commonly known as diesel exhaust fluid or DEF). DEF is used to significantly lower NOx (nitrogen oxide) emissions. Oilmen's recognized that it was crucial to incorporate components that are compatible with the unique properties of DEF and that purity throughout the delivery process is maintained. Oilmen's system is composed of stainless steel components that meet ISO 22241 (International Organization for Standardization) specifications and are capable of pumping DEF at rates up to 80 GPM. Terra Environmental Technologies (TET), North America's largest DEF manufacturer, partnered with Oilmen's Truck Tanks to provide them with TerraCair® DEF for weights and measures testing.

The Nation's First Approved DEF Tank Truck

- 3800 Gallon Stainless Steel Tank
- All Wetted Components
Stainless Steel Construction
- 80 GPM Weights and Measures
Approved Pumping System
- Pump, Meter, Reel, Hose,
Filter and Fittings meet ISO
specifications 22241-1 thru 3
- Peterbilt 340 Chassis

About Oilmen's Truck Trucks, Inc.

Oilmen's has been designing, equipping, and stocking tank truck and fuel truck delivery equipment for a wide range of customers since 1951. Today, Oilmen's offers truck tank delivery equipment to both national and international customers dealing in both new and used truck tanks for delivery of gasoline, diesel, bulk oil, and now DEF/UREA. Oilmen's also offers DEF/UREA compatible parts, plus a wide range of truck tank related equipment including pumps, meters, reels, hoses, terminal loading equipment, and computer register equipment. Oilmen's offers expert repair service and stocks one of the industry's most complete inventories of high quality, well-known name brand parts for all equipment they sell and service. Oilmen's dedicated personnel are committed to producing the most leak-free, efficient, trouble-free, and longest-lasting truck tank units available. For more information: www.trucktanks.com
