

Secondary Containment Available for Tote Storage Enclosure System

Charlotte, NC - January 22, 2010 - SPATCO™ DEF has added an industry first secondary containment feature to their Tote Storage Enclosure System. Secondary containment is required for the storage of all regulated hazardous materials. While Diesel Exhaust Fluid (DEF) is not considered a hazardous liquid by the EPA, this containment option will be a benefit to those customers concerned with ground and water contamination.

"It was critical to our customer that the equipment they installed have secondary containment. The 330 gallon Tote Enclosure from SPATCO™ DEF met the customer's specs while maintaining product integrity during Iowa winters" says Tad Cooper, executive vice president, Acterra Group.

All SPATCO™ DEF Enclosure Systems are designed in accordance with the EPA's Aboveground Storage Tank guidelines and are available for order now through one of our qualified distributors.

Standard features include:

- Insulated and heated, 330 Gallon FRP tote enclosure
- Large Door opening for easy tote removal and replacement
- Integral Door for accessing dispensing nozzle and flow meter
- Mag-Drive self-priming pump
- Stainless Steel Automatic Nozzle with Full Nozzle Boot for nozzle storage
- Positive Displacement Gear Flow meter with electronic resettable totalizer and output pulse for connecting to existing fleet management system.
- Flow meter has 0.5 % accuracy
- 15 ft. Dispensing Hose with 5 ft. Suction Hose for connection to tote
- Spring Retractable Hose Reel with Stainless Steel internals for dispensing hose
- Forklift channels for easy mobility

About SPATCO™ DEF

SPATCO™ DEF manufactures field-tested and proven DEF Dispensing Systems for commercial and private fleets, municipalities, school and city bus garages, trucking companies, agriculture, construction, and retail truck stops.
