Cummins Filtration Rolls Out New DEF Options

6/23/2009

Cummins Filtration has rolled out smaller packaging options as well as dispensing equipment for diesel exhaust fluid.

Fleetguard DEF was previously available in bulk, 330-gallon plastic totes, 275-gallon disposable totes and 55-gallon plastic drums. Cummins now offers 1-gallon, 2.5-gallon and 5-gallon containers. The dispensing equipment offered includes air and electric pumps for both drums and totes.

Separately, Cummins Filtration's DEF product recently received API certification, a voluntary program of the American Petroleum Institute to certify and monitor DEF throughout the supply chain.

Cummins Filtration's network, which includes more than 20,000 locations and 8,000 retailers in North America, will have access to the new offerings.

"We can also offer dedicated, streamlined DEF shipments as desired by our customers and as the DEF consumption demand grows in the future," said KC Hall, director of DEF business development.
